

Frequently Asked Questions from Parents

Who can I contact with questions?

- Cassandra Hirdes, SAS Program Coordinator
 - scheduleforsuccess@email.arizona.edu
 - 520-626-8017
- Your student's Learning Specialist (see next FAQ)
- Math department: <http://math.arizona.edu/academics/placement>

Can I talk with my student's Learning Specialist?

You may speak with your student's Learning Specialist; however, they can only share information that is general in nature unless the student has granted the Learning Specialist permission for open lines of communication between parent, student, and Learning Specialist.

How can help my student in this program?

Encourage your student to take full advantage of all the program entails: Learning Specialist appointments, free tutoring, and Math department support (Pascal's ILC 140). Also, encourage consistent communication with their SAS instructors (via email and office hours) and contact math via their Facebook page ([facebook.com/UAMath100](https://www.facebook.com/UAMath100)). Finally, tell them to check their email! We provide lots of useful and need-to-know information for students from scheduleforsuccess@email.arizona.edu

Will this math class delay my student's expected graduation date?

Since Math 100AX and SAS 100AX do not count toward student's graduation requirements many students find it helpful to take a summer course to help ensure they stay on track for a four year graduation timeline. A student's progress in Math 100AX is based on how far they advance in the fall semester. Students have the opportunity to try and test into higher levels of math after their first semester which can help them take their required math classes during their first year (this is very dependent on a student's major and math requirement).

We always encourage students to speak with their academic advisors to understand more about their options and graduation requirements. www.advising.arizona.edu
